

# SSL Essentials: Technology, Applications, Advantages, Disadvantages

Kevin Dowling, PhD Vice President Innovation April 23, 2007

# SSL Technology

#### Indication to Illumination

- Monochrome Indicators
  - Traffic lights, automotive, exit signs etc
  - Portable appliances, cell phones, PDAs
  - Signage
  - Direct view displays; video screens
- Emerging Applications
  - Transportation: marine, auto, aviation etc.
  - Lighting niches
- Future
  - General Illumination

## **Lighting Sources**

#### **Conventional Lighting Sources**

#### **LED Lighting Source**

Incandescent

Halogen

Fluorescent

 Gas-discharge (e.g neon)

Light emitting diodes (LEDs)

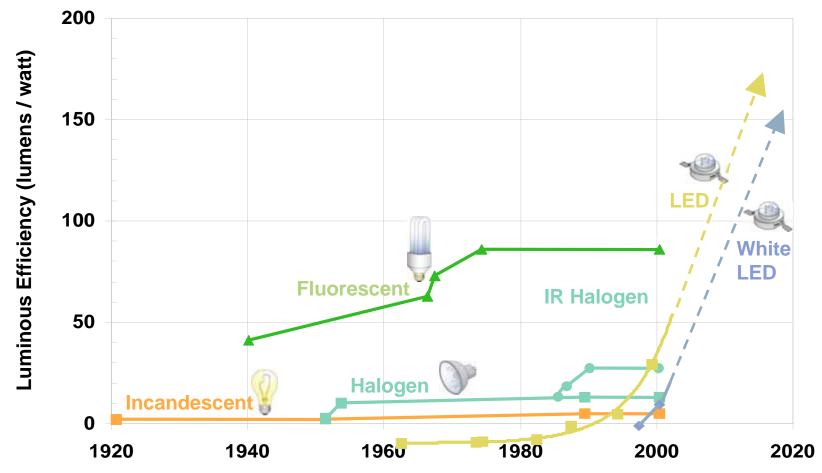

#### **Benefits of LED Lighting**

- Ultra long source life
- Low power consumption
- Low maintenance
- No UV or IR radiation
- Cool beam of light
- Digitally controllable
- Sustainability

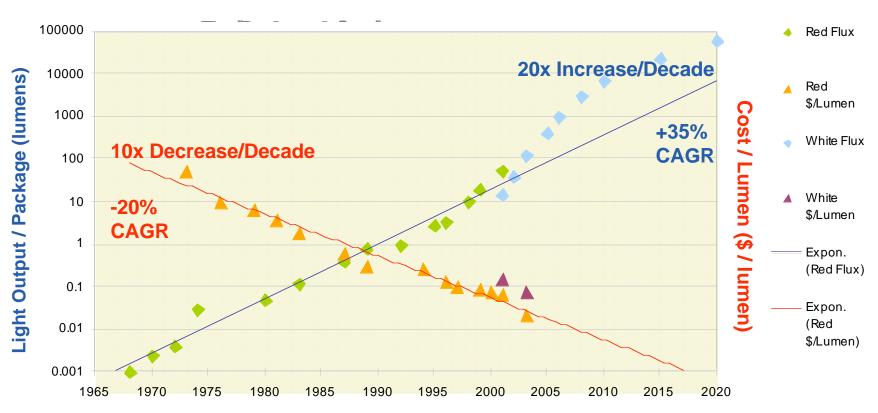

## Market Trends: LEDs Eclipsing Traditional Technologies

Source: Lumileds

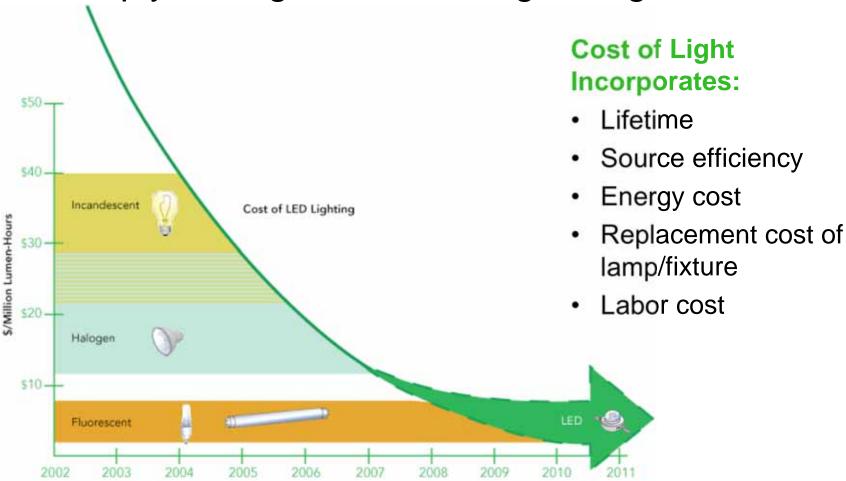

## Haitz' Law: LED Light Output Increasing/Cost Decreasing

## Market Trends: Sharply Falling Cost of Intelligent Light

Source: Color Kinetics; Research conducted with white LEDs only; Color Kinetics estimates, and are not indicative of future performance

## **Energy Conservation**

- Based on lamp and White LED manufacturers' data, commercially available LED sources are four times more efficient than conventional incandescent and halogen sources
- There are already laboratory White LED sources that are 30% more efficient than linear fluorescent sources
- Off-the-shelf LED sources are only 18-35% less efficient than compact and linear fluorescent sources today and the gap is closing rapidly. The trend is key, not the snapshot
- Lighting uses 20% of electricity used in US Buildings\*
- Cascade effects: lighting adds heating loads in retail and commercial facilities\*

<sup>\*</sup> Source: US Department of Energy http://www.eia.doe.gov/

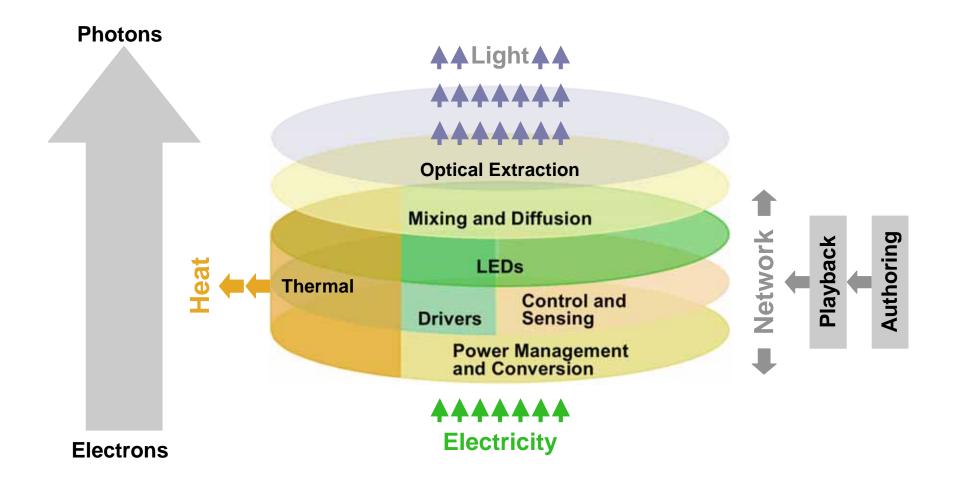

## Market Trends: Energy Conservation

- CFL adoption: We must support interest in energy efficient light sources
- Additional LED benefits
  - Potentially better quality of light
  - Control capability including dimming and CT control
  - Longer lifetimes
  - No Mercury
    - Even small amounts of Hg require all fluorescents to be treated as haz waste upon disposal (I.e.California's Title 22)
  - LED light more easily directed.
- The scale is likely to ultimately tip in favor of LEDs

## LED Lighting Systems: What's Involved

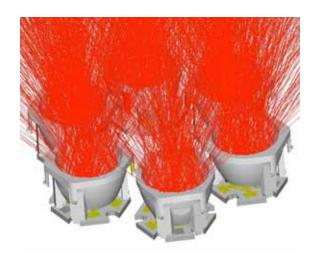

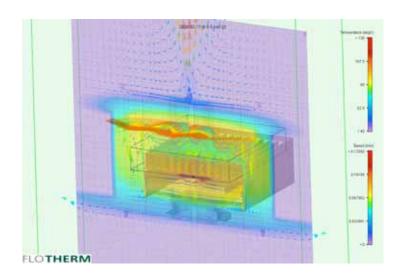

## **Technical Challenges**

- Managing Systems
- Integrating Technologies

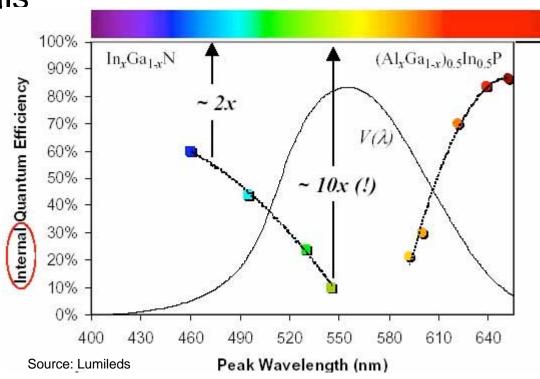

#### **Technical Frontiers**

- Efficacy improvements
- 'Green Valley'
- Lower Cost Materials

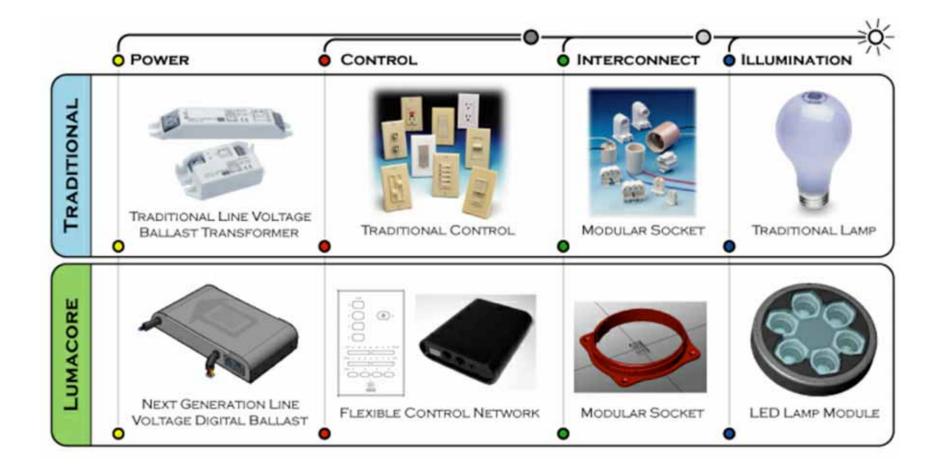

## Anatomy of an Intelligent LED Lighting Solution

## Anatomy of a Next Gen LED Lighting System

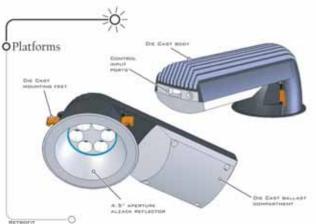

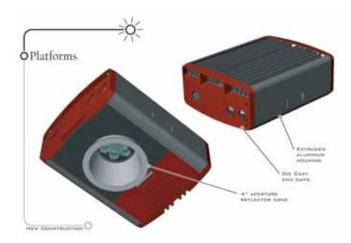

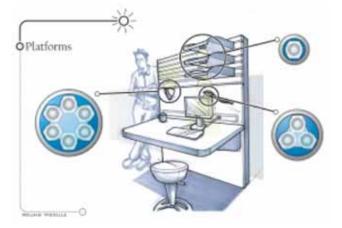

## Re-inventing the Lighting System

The complete solution that will set a new standard form-factor for LED systems

## Transforming Environments

- Color Effects
  - Light as entertainment
  - Light as atmosphere
  - Light as architecture
  - Video as lighting content
  - Light to increase sales\*

## Transforming Environments

- Color Temperature Control
  - Optimize product aesthetics
  - Create a desired environment
  - Increase workplace productivity
  - Improve customer experience

- Single Color
  - Specify CT for specific applications
  - Fixed color dimmable

#### **Assessment**

There is nothing technically intractable or infeasible to achieving high quality, high performance lighting based on LEDs.

Costs will continue to drop

Manufacturing improvements

**Economies of scale** 

Production costs

# **SSL** Applications

## SSL and the Global Lighting Market

#### **Global Lighting Market Size**

(in billions)	2004/2005
Lamps	\$18
Fixtures	\$70
Total	\$88

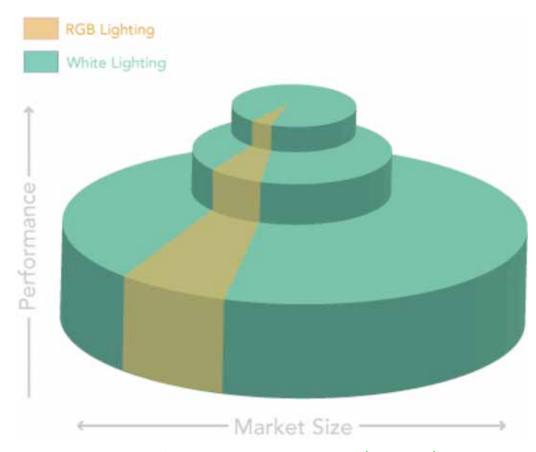

Source: Freedonia Group, Inc. Studies 2067-Lighting Fixtures & 2004 - Lamps

#### **U.S. Lighting Market Size**

(in billions)	2004/2005
Lamps	\$4.4
Fixtures	\$17.4
Total	\$21.8

Source: Freedonia Group, Inc. Studies 2067-

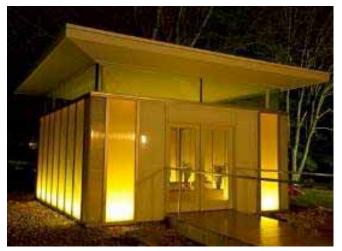

Lighting Fixtures & 2004 - Lamps

Potential Addressable Market: \$20B to \$30B

### **Current SSL Markets**

Architecture

Hospitality

Entertainment

Retail

## **Energy Conservation**

- Los Angeles International Airport (LAX)
  - Expects to cut energy consumption by 75%
    - Annual electric bill from \$73K to \$18K
  - Expects to reduce annual maintenance costs from \$1M to \$20K
  - Based on CK calculation,
     entire cost of installation
     is recovered in ~28 months

## Market Trends: Energy Conservation

- Hardrock Hotel and Casino
  - Expects to reduce annual operating costs by \$41,000
  - Previous metal halide fixtures drew about \$18,000 per year
  - LED-based units projected to draw about \$1,900 per year

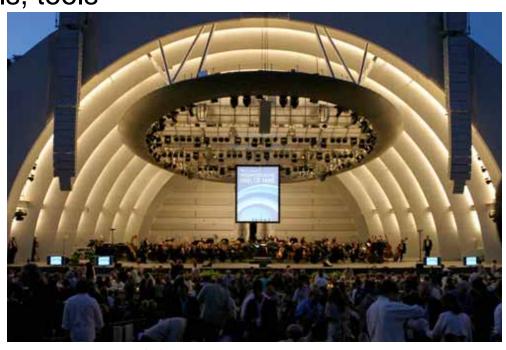

- Previous fixtures cost about \$25,000 per year for maintenance, not including filters and ballasts
- LED-based units are expected to run only \$600 per year for maintenance

## Market Integration

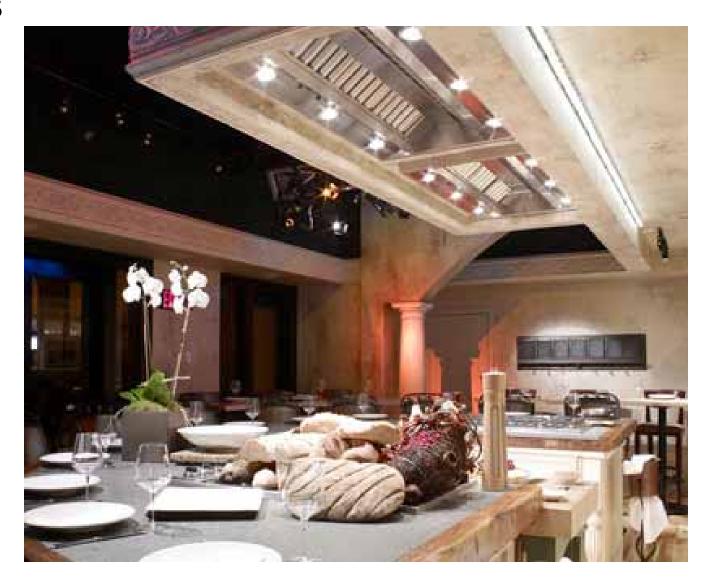

- Verticals and Horizontals
  - Most industries evolve to horizontal stratification
  - In LEDs this could be
    - Substrates, Materials, tools
    - Wafers, Packages,
    - Optics, Thermal
    - Power, Drivers,
    - Lamps, Luminaires
    - Controllers
    - Systems

## **Applications**

Hospitality

**Applications** 

Hospitality

#### Retail

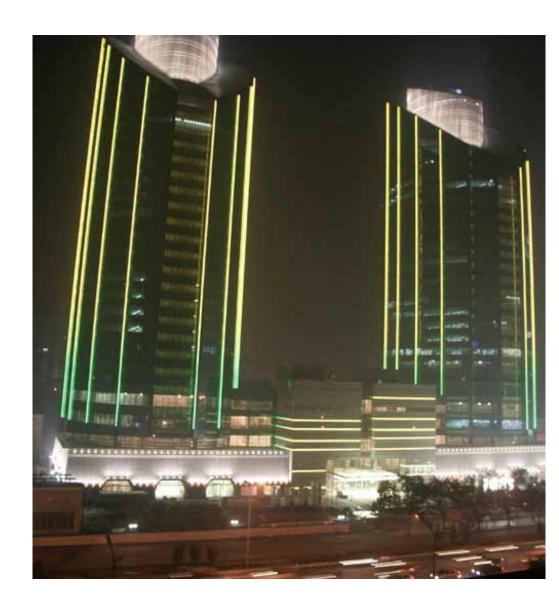

- Display
- Merchandising
- Low to Medium
   Illuminance

### **Architectural**

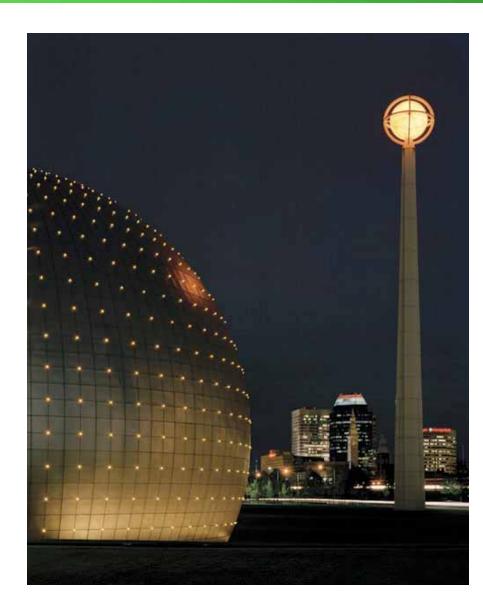

Outlining Buildings

## Museum

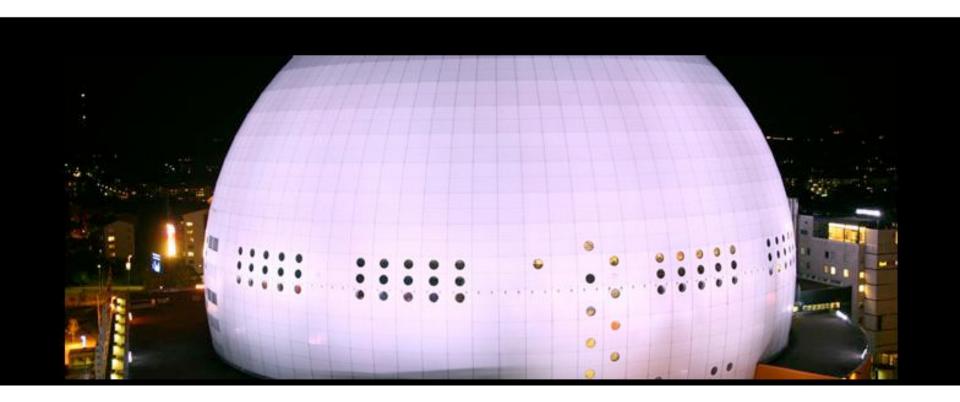

• White points of light

### Architecture

• 110m diameter performance venue

## SSL Added Value: Bridge Application

- Vibration
- Humidity
- Temperature
- Lifetime

Cost of Maintenance

## **Technical versus Market Progress**

- Many of today's technical issues are being addressed
  - Color (Temperature)
  - Efficacy
  - Quality of Light
  - Thermal
  - Binning
- If no improvement were made in LEDs today the market would still be growing.
- Laboratory to market is 18 months but market to substantive applications is longer

## Migration

- Specifier business
  - Distribution, Representatives
  - Long sales cycle
  - Many players
  - Issue of Value Engineering
- Commercial business
- Retail

#### Old and New

 Efforts into research into traditional lighting diminishing over time. Mature.

- Ripe for change!
- Who imagined this?

## SSL Features Enabling Mainstream Adoption

- Real efficacy parity or better with fluorescent sources
- Costs allowing two year or less ROI
- Standards for specifications

But is this enough? Witness CFL history.

#### **Standards**

- Fast becoming real
  - Luminous Flux
  - Lumen Depreciation
  - Chromaticity
  - And more...

#### Education

A huge part of growing this market is education.

Benefits of SSL

Issues with current technology

How they work

Benefits and limitations

## Disadvantages of SSL

- What is slowing adoption?
  - Cost
  - Fear
    - Another CFL
    - Another Fiber
  - The Right Products

## Trends in Lighting

- Theater in retail
- Theater in home
- Layers of light
- Lighting design
- Not just engineering

## What's Changing?

- Everything
  - Lighting Technology
  - Lighting Applications
  - System Models
  - Business Models

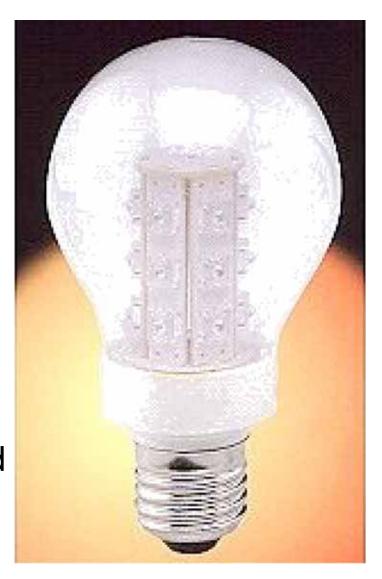

## Real Danger: Hyperbole

"Uses almost no energy!" 
"Lasts Forever!"

Nothing will kill an industry faster than expectations that cannot be met.

Performance must be realistic and factual.

Costs must be complete.

## Role of the Department of Energy

- DoE is investing wisely
  - Looking to the Past
    - Learning historical lessons
  - Looking at the Present
    - Investing in new ideas
    - Building industry, academic, and utility partnerships
    - Sponsoring Workshops -> Roadmaps -> Investments
    - Creating Energy Star guidelines
    - Supporting and driving standards
  - Looking to the Future
    - Competitions
    - Accelerating adoption

Eye on the Light
